

Pharma Compliance Case Studies Pack

Two published Eunomia engagements in one document: how a five-market fair market value methodology was designed, and how a structured materials-review service supported a UK company expanding across Europe.

For: Compliance, Medical Affairs, Finance and leadership teams comparing approaches to HCP compensation and promotional review capacity.

Case study 1: Fair market value methodology for HCP compensation

- **Client and challenge:** a multi-market pharmaceutical company needed a consistent FMV framework across the UK, Germany, France, Italy and Spain, covering general practitioners, specialists, nurses, pharmacists, payers and patient contributors. Fragmented benchmarks, inconsistent tiering and individually negotiated rates made decisions difficult to explain and audit.
- **Methodology:** a five-step calculation framework covering base compensation, available hours, practice displacement adjustment, a composite adjustment factor and tiering premia, with each rate traceable to the methodology and its source data.
- **Benchmarking and tiering:** independent compensation and working-hours sources, including NHS pay circulars, ONS ASHE, ERI, WTW and national sources, and a four-tier framework using documented criteria such as publications, trials, role and experience.
- **Validation and deliverables:** Compliance, Medical Affairs, Finance and Legal reviewed the inputs in structured working sessions. Deliverables included rate cards for six stakeholder categories across all five countries, an audit trail and an approach to annual indexed recalibration.
- **Reported outcomes:** payments within the defensible FMV range increased from 66% to 98%; the average hourly rate decreased from £520 to £385; time to contract fell from 14 days to 6 days.

Case study 2: Pharmaceutical materials review as a shared service

- **Client and challenge:** a mid-sized UK-headquartered pharmaceutical company was expanding across Europe with a lean compliance organisation and no dedicated promotional review function. Rising material volumes and complexity put pressure on its review process.
- **Service design:** a review framework integrated into the client's systems, with experienced reviewers and signatories, workflows, SOPs, review templates, governance, quality assurance and audit-ready documentation.
- **Capacity and local expertise:** global and UK promotional and medical review support, with access to local expertise as the business entered additional markets, designed to scale without building equivalent permanent infrastructure.
- **Reporting:** administrative support and reporting on review activity, turnaround, approval trends and recurring issues, used to monitor performance and improve material quality.
- **Reported outcomes:** review turnaround reduced from five days to two, and review cycles from four to two, attributed to dedicated reviewers, actionable feedback and communication between reviewers and material owners.

What the two engagements have in common

- A documented method that makes each decision traceable to its inputs and approvals.
- Cross-functional validation, so Compliance, Medical, Finance and Legal work from the same basis.
- Reporting that shows how the process performs, so it can be improved over time.

Results are those reported for each engagement in the August 2026 case studies. They are not general benchmarks or promised outcomes.
